

Kubo

Kubo combines the flexibility of a tent with the best characteristics of a fixed construction: generous room height, a large branding area and partial insulation possibilities. Due to the side height of four metres and an additional roof fascia, the Kubo stands out in any environment.

Minimum dimensions:

W 10.0m

D 5.0m

H (eaves): 3.86m

H (total): 4.95m

Width and depth can be expanded in 5m intervals.

Maximum dimensions:

W 25.0m

D 25.0m

H (eaves): 3.86m

H (total): 4.95m

(static measures for larger floor areas required)

Strengths

Thanks to a thermal roof, thermal wall panels and insulated glass, Kubo offers various possibilities for partial insulation of the structure. As a result, Kubo is also suitable for long-term use in the winter. A predetermined facade system offers more possibilities for the placement of messages and branding.

Use

Due to the high quality of the individual components, the Kubo is especially suited to temporary use lasting a few days or weeks. With the Kubo, you choose between wall elements made from glass or plastic and thus achieve the desired design effect. The roof fascia running along the perimeter is at least 1.48 metres high and provides lots of space for branding with an announcement effect.
